1. Abstract & Introduction

1.1 Abstract

150–250 words. Cover: the problem, the approach, the main technology, and the key result.

This project presents [project name], a [type of system] designed to [main purpose]. The system uses [technique/technology] to [what it does]. Testing showed [key result, e.g. accuracy / speed / improvement], demonstrating that the proposed approach is effective for [application area].

Keywords: [keyword 1], [keyword 2], [keyword 3], [keyword 4]

1.2 Introduction

Give background, why the topic matters, and how the report is organised.

[Describe the domain and its current importance. Explain existing practices and where they fall short. Introduce your solution in two to three sentences.]

1.3 Report Organisation

Section 2 defines the problem, objectives and scope. Section 3 lists features and requirements. Section 4 explains algorithms and methodology. Section 5 covers technologies and implementation. Section 6 presents results and testing. Section 7 concludes with future scope and references.

2. Problem Statement, Objectives & Scope

2.1 Problem Statement

One clear paragraph: who has the problem, what it is, and why current solutions are inadequate.

[Users/organisations] face [problem] because [cause]. Existing solutions such as [A] and [B] are limited by [limitations]. There is a need for a system that [needed capability].

2.2 Objectives

- To design and develop [system] that [primary goal].
- To implement [algorithm/technique] for [task].
- To achieve [measurable target, e.g. 90% accuracy / under 2 s response time].
- To evaluate the system against [baseline / existing method].

2.3 Scope

In scope

- [Feature or module included]
- [Target users / platforms / data]

Out of scope

- [Feature not covered]
- [Known limitations or assumptions]

3. Features & Functional Requirements

3.1 Key Features

- **[Feature 1]:** brief description.
- **[Feature 2]:** brief description.
- **[Feature 3]:** brief description.

3.2 Functional Requirements

ID	Requirement	Priority
FR-01	The system shall [do something specific].	High
FR-02	The system shall allow users to [action].	High
FR-03	The system shall [generate / store / display] [output].	Medium
FR-04	[Requirement]	Low

3.3 Non-Functional Requirements

- **Performance:** [e.g. response within 2 seconds].
- **Security:** [authentication, encryption].
- **Usability:** [ease of use].
- **Reliability / Scalability:** [targets].

4. Algorithms & Methodology

4.1 Overall Approach

Describe the system workflow. Insert an architecture diagram or flowchart as Figure 4.1.

[Explain the stages: data collection → preprocessing → processing/model → output.]

4.2 Algorithm Description

[Name the algorithm. Explain why it was chosen, how it works, and its complexity.]

Algorithm 1: [Name]

- **Input:** [data]
- **Step 1:** [action]
- **Step 2:** [action]
- **Step 3:** [action]
- **Output:** [result]

4.3 Data & Parameters

[Dataset source, size, preprocessing steps, key parameters and hyperparameters.]

5. Technologies & Implementation

5.1 Technology Stack

Layer	Technology	Purpose
Frontend	[e.g. React / HTML, CSS]	User interface
Backend	[e.g. Python / Node.js]	Business logic
Database	[e.g. MySQL / MongoDB]	Data storage
Tools	[e.g. Git, VS Code]	Development

5.2 System Architecture

Add architecture / block diagram here as Figure 5.1.

[Describe the main modules and how they interact.]

5.3 Implementation Details

[Describe how each module was built, key code logic, APIs used, and challenges faced with how they were solved.]

5.4 Hardware & Software Requirements

- **Hardware:** [processor, RAM, storage]
- **Software:** [OS, runtime, libraries]

6. Results, Testing & Performance

6.1 Testing Strategy

The system was tested at unit, integration and system level to verify that each requirement was met.

6.2 Test Cases

Test ID	Description	Expected	Actual	Status
TC-01	[Test input / action]	[Expected output]	[Actual output]	Pass
TC-02	[Test input / action]	[Expected output]	[Actual output]	Pass
TC-03	[Test input / action]	[Expected output]	[Actual output]	Fail / Pass

6.3 Performance Evaluation

Metric	Result	Baseline / Target
[Accuracy / Precision / Recall]	[value]	[value]
[Response time]	[value]	[value]
[Memory / CPU usage]	[value]	[value]

6.4 Results & Discussion

Include screenshots, graphs and output samples as Figures 6.1, 6.2 …

[Interpret the results. Compare with the objectives and existing methods, and explain any limitations.]

7. Conclusion, Future Scope & References

7.1 Conclusion

[Summarise what was built, how it met the objectives, and the main findings.]

7.2 Future Scope

- [Enhancement 1, e.g. add more features or modules]
- [Enhancement 2, e.g. improve accuracy or scalability]
- [Enhancement 3, e.g. mobile / cloud deployment]

7.3 References

Use one style consistently (IEEE shown below).
